

Connexionz UK

Company Overview

About Connexionz

Public transport is a growth business. Government agencies worldwide are saving energy, protecting the environment and improving the quality of their citizens lives by bolstering bus services.

Connexionz' combined CAD, AVL and passenger information systems allow operators to manage their service efficiently and accurately, while also providing increased security for drivers and passengers.

Founded in 1998, Connexionz offers comprehensive, end-to-end, transit solutions that simplify management, maximise productivity and improve services. Connexionz has operational systems providing reliable information to bus passengers and service operators.

From the reporting application that details historic and real-time fleet performance, to the dispatch application that shows the real-time location of buses on a map, Connexionz' products give users a greater degree of control. With real-time reporting for example, operators can immediately see if a bus has started a trip early, or is off-route, and can resolve the situation as it happens.

Connexionz takes pride in their efficient, user-friendly and affordable products. With dependable software and hardware products of innovative design, Connexionz can help customers to reduce costs, increase security and grow patronage. These products are continually being developed to suit both the growth in user expectations and technological advances, and are versatile enough to interoperate with other vendors products.

With a Connexionz system, bus operators know that their service is working efficiently and customers are satisfied; regulators are assured that funding conditions are being measured; and all stakeholders can be confident their resources are being wisely spent and service patronage is likely to rise.

Product briefs

Connexionz' systems benefit everyone in the public transport chain, from the transit authority right through to the passenger at the bus stop. With the information our systems provide, each one can enjoy greater certainty that their bus service is operating effectively.

With industry-leading features, advanced capabilities and outstanding performance, Connexionz provides quality solutions to real-time information delivery.

CONNEXIONZ
Real Time Tracking

Real-time vehicle tracking

The AVL application:

Automatic Vehicle Location (AVL) allows depot staff to view the current location of buses. In addition, the map can show route paths and bus stop locations. Connexionz' AVL application enables operators to improve resource utilisation and operational efficiencies.

Optimizing bus dispatch

The dispatch application:

Connexionz' dispatch application is a richly equipped tool designed to assist dispatchers and supervisors in the day-to-day running of their depots. Tailored to the needs of small to medium sized depots, the dispatch application provides static, real-time and historical information for easy management and control.

Service performance analysis

The reporting application:

Connexionz' reporting application can allow you to enhance service quality, improve efficiency and optimize productivity. With fully customizable data analysis, Connexionz' reporting application enables you to produce custom-made reports on any area of non-compliance, for example, early departures.

Electronic signage

Displays:

Connexionz of a range of LED, TFT & Solar power displays that show Real Time Information & Multimedia Content.

On bus hardware

Connexionz can also supply (or interoperate with) the following:

- Electronic Ticket Machines (ETM)
- Next stop Annunciators
- Security Cameras
- Passenger Counter
-
