

Press Release

Southampton RTI improves with new i-connex diagnostics

Hot on the foot of the successful launch of Connexionz passenger counting and networked camera systems at 'Coach and Bus 2009' last week, they announce the launch of their latest, improved RTI management and control suite.

Designed to enhance the existing functionality the new software offers:

- a) Simplified data import routines (including TransXchange)
- b) Advanced diversion handling
- c) Simple automated display diagnostic suite
- d) Flexible 2 way UTMC interface.

They say that this keeps their system at the forefront of development in the field and means that operators and local authorities can get far more for their money, whilst reducing running costs.

The first deployment is in Southampton where The system is already generating improvement to display performance.
