

Connexionz UK

Mobile Ticketing

About Connexionz

Connexionz is proud to offer Mobile Phone Ticketing. Connexionz has developed a ticketing solution that is user-friendly, secure, and adds value to existing services.

How it works

Passengers simply send a text to the RTI system, which automatically responds with a secure PIN number or barcode verifying payment authorisation. The passenger then presents the pin number/barcode to the bus driver on boarding. The number/barcode is then checked by the system via a ticket machine. For those buses without a ticket machine, the system issues a text to the driver that lists all of the electronic tickets purchased for that journey (both all-day tickets & flat fares are supported). The driver then issues a paper ticket to the passenger for inspection and/or auditing purposes, although this can be omitted if required.

Connexionz mobile phone ticketing system has inbuilt security routines to minimise the risk of fraud, and the system can also be modified to accommodate your own financial processing and auditing requirements.

Back at depot the value of redeemed tickets is checked against the payment summary.

Connexionz integrate mobile ticketing systems with Customer relations management allows you to achieve rapid customer acquisition and offer customers the opportunity to check, buy and receive tickets via mobile phone. The mobile-enabled solution will help you to provide personalised interaction with customers. Consequently enabling you to offer customers the products and promotions they need to increase their satisfaction, loyalty, and in turn, your sales growth.

Key Benefits

- Convenient and simple to use
- Accepts credit card payments — passengers don't have to worry about carrying change
- Payment is cleared automatically and securely via an internationally recognised system
- Save time by reducing the need for drivers to handle and count cash
- Zero capital costs for pre-existing Connexionz Real Time Information systems
